UNDERGRADUATE RESEARCH POSITIONS AVAILABLE

Undergraduate research positions are immediately available in the Cellular Mechanobiology Lab (www.odu.edu/~vmarutha) directed by Dr. Venkat Maruthamuthu. Selected students will carry out experimental research at the interface of engineering and life sciences with the goal of understanding how mechanical forces influence cell function.

Students will be required to work for 10 hours per week, preferably including during the summer. This position comes with a stipend of about $5000 per year.

Applicants could be juniors, sophomores or freshmen. Applicants can be in mechanical engineering, biological sciences or health sciences. Prior experience is not required, but the student should be strongly interested and motivated to learn.

How to apply: Interested students should send an e-mail to Dr. Maruthamuthu (vmarutha@odu.edu) explaining why you are interested, along with a C.V/resume (with GPA listed) attached. Applicants will be considered starting now until suitable student(s) are selected.
