Comprehensive Exam

The Comprehensive Exam for Master of Engineering (M.E.) with Concentration in Modeling and Simulation Engineering is an exam to be taken in the last semester of an M.E. student’s degree program. The exam is a take-home exam that allows one week’s time to complete. The exam tests some basic concepts that students have learned during their degree program and does not involve specific problems and calculations. Examinees need to elaborate on the use of these concepts in their previous courses and current or future work. The exam takes approximately one hour to complete. To prepare for the exam, students need to review key concepts and theories covered in the core courses.
