1. The field trips were too lengthy on occasion. The requirement to come early, during the activity hour, was more than should have been expected. Other than that, Dr Musselman's knowledge and enthusiasm for the subject helped 'carry' the class. A little more timely info on due dates, specific requirements of projects (website, collection) would have been helpful.
2. Dr M's a great guy Intelligent smart witty Communicative ☺
3. seriously need to work on organization of course but besides that class was great
4. I think that Dr. M is very passionate about the subject of botany, which is very nice to see, and rare. However, I feel he is a bit out of touch with the level of knowledge we should be at, coming into this course with no previous training. We only see a plant once, for thirty-seconds, and then we're tested on it\* two months later. He's been doing this for 30 years, so of course it's easy for him, but he expects it to be easy for everybody else, when we haven't built our careers on this stuff. The quizzes are done poorly. Instead of taking them as soon as you get to the place, it would be wiser & more effective to give them near the end of the trip, after reviewing plants. He needs to keep in mind that he's not there to trick us, so reviewing would be very beneficial

\* or a fragment of it
