Faculty Senate Issue Log Form

Date-Submitted: 10-3-23

Title-of-Issue: Driver authorization process

Description: There is a lot of information that is being collected on employees for what seems to be rather limited relevance to the university. And that info is then being shared with chairs, who act as hiring and purchasing managers for the university. Not clear to me why they would be notified of my driving record.

Rationale: I have concerns about privacy being violated for faculty and employees through this process. The university is not assuming financial responsibility for accidents, etc., that may happen when one uses a personal vehicle, so I don't understand why it should need to access my driving record, and communicate that to others, in order for me to be authorized to drive my own car on university business. Also, why is there an "authorization" process at all-doesn't my license and active insurance certify that?
