Computer Engineering M.E./M.S.

Improvements:

Based on advisory feedback as well as content expertise displayed by students within the thesis, exam, and project options, it was determined that cybersecurity knowledge needed to be strengthened. As a result, the ECE Department has introduced two cybersecurity courses (ECE 516 and ECE 519) and two advanced topic courses (ECE 595 and ECE 795/895) in power system. These courses were added to support the needs of students to expand the breadth of knowledge in the field of power systems and cybersecurity. The impact of these course additions will be assessed in the subsequent year to two years.
